...Abstract: parts are considered in this box: the speech compression unit, the host interface, and the **speakerphone** module. A low-cost non-delicate speech coprocessor is embedded to process the heavy job of speech coding, a CPLD device is employed to **control** the host access timing, a 16-bit PCM codec and an audio amplifier with acoustic **echo cancellation** features are introduced to optimize the **speakerphone** module. The experimental coding rate is 8.5 kbps. At such a rate, the popular modems can conform to offer **full - duplex** speech in real time. Modern applications of this system include digital simultaneous voice data (DSVD...

...Descriptors: digital **signal** processing chips...

...Identifiers: **speakerphone** module...

...acoustic **echo cancellation** ; ...

... **full - duplex** speech
